

Quality objective of the University Medical School for 2020

Explanation, preamble

Setting quality objectives related to educational, research and administrative processes is also laid down in the standards and principles of quality assurance of the European Higher Education Area (ESG) in ESG 1.1. Standard Quality Policy. Quality objectives can be interpreted as the practical implementation of ESG standards in quality assurance policy, which facilitate the participation and responsibility-acceptance of all members of the Institution in quality assurance. Based on the MSZ EN ISO 9001:2015 Quality Managements Systems, Chapter 6.2 of Standard entitled Requirements prescribes planning, i.e. identifying quality objective

Description:

In accordance with its Quality Policy declaration and strategy of the University Medical School at Pécs University the Senior Leadership of the Medical School decided on identifying a quality objective related to the development of education and also applicable to scientific research activities. Quality objectives can be broken down into several constituents, which in themselves can constitute partial objectives, which we plan to implement in the form of small projects. With the quality policy and result-oriented objectives of the Senior Leadership we can meet the quality criteria of the Requirements Standard MSZ EN ISO 9001:2015 at a higher level.

- 1) The education development objective is based on an element of the quality objective for 2018. An important part of the educational activity of the Medical School are practical training and the partner health care institutions participating in it. In the quality management system, related to the main activity, the control of processes financed from outside sources, including educational service provided outside the area of the Medical School's operation is a priority. We are planning to develop a unified system of supplying data in cooperation with the Clinical Centre, the teaching hospitals and the Medical School. Our aim is to provide development opportunities for our partners participating in training. This objective is in line with principles laid down in standards ESG 1.7. Information management; ESG 1.3 Student-centred learning, teaching and assessment; ESG 1.5. Instructors; ESG 1.2 és ESG 1.9 Developing and approving / continuously monitoring and regularly evaluating training programmes.
Partial projects: extending the POTEcho and POTEPIA educational development projects, data supply eligible for the Medical School level expectations involving partners, extending educational development projects and carrying out subcontractors audits.
- 2) The organizational culture development program is closely related to the educational development objectives. The acquisition of a similar outlook and values regarding the Medical School directly affects the mindfulness and competence of its employees, and indirectly affects the quality in support of education and research. The faculty is maintaining the "7 HABITS OF THE OUTSTANDINGLY SUCCESSFUL PEOPLE" program, as the main pillar regarding the organizational culture. In consideration of this objective, the leadership wishes to promote

ongoing forms of training and integrate the dividend into the careers of the instructors, and support the individual development of the employees employed in non-educational fields. This objective is in line with the principles laid down in standards ESG 1.5. Instructors; ESG 1.6 Learning support and student services; ESG 1.2 and ESG 1.9. Developing and approving / continuously monitoring and regularly evaluating training programmes.

Partial projects: developing an educational plan, assessing demands, and organizing various forms of training and workshops.

- 3) As regards to the research and developmental objective, we continue a comprehensive situation assessment related to performance in research among the units aligned to the Medical School, regarding the quality objectives of the previous year. As a part of the development objective, we maintain the research ethics of the faculty and provide support and service systems regarding research activities. As a part of the quality objective, we establish a central data base regarding the faculty's current research progress. This objective is aligned with the principles set forth in Standards ESG 1.5. Instructors; 1.7. Information management;

Partial projects: involves senior researchers in the Medical School research programs, developing and publishing additive materials, and establishing a real-time data base regarding the research activities of the faculty.

In order to further develop the quality management system, we strived at identifying easy to understand and measurable partial aims. The implementation of the objectives will be evaluated in all-round internal audits followed by supervision. By involving units of the Medical School we extend the implementation of the quality objective, expecting contribution to the implementation of developmental aim identified by the Senior Leadership at all levels of the organizational structure. To achieve this, colleagues responsible for quality management in the individual departments will receive detailed preparation for and information about the tasks. There is detailed description of the documents certifying the progress of quality objectives. In all activities of quality management, including quality objectives, potential risks are pre-planned, which is elaborated in the partial projects.

Responsibility, deadline

Responsible for implementation: dr Miklós Nyitrai, dean. The implementation of the quality objective will be supported by members of project groups appointed by the dean and colleagues of the Quality Management Unit.

Planned deadline for elaborating partial projects: 30/04/2020

Planned deadline for achieving the quality objective: 31/12/2020

Dated: Pécs, 10 March, 2020

Approved by: dr Miklós Nyitrai

dean
