Sport science related research topics in para sport articles I.

Dehghansai et al, 2017: systematic review about training effectiveness based on 21 articles

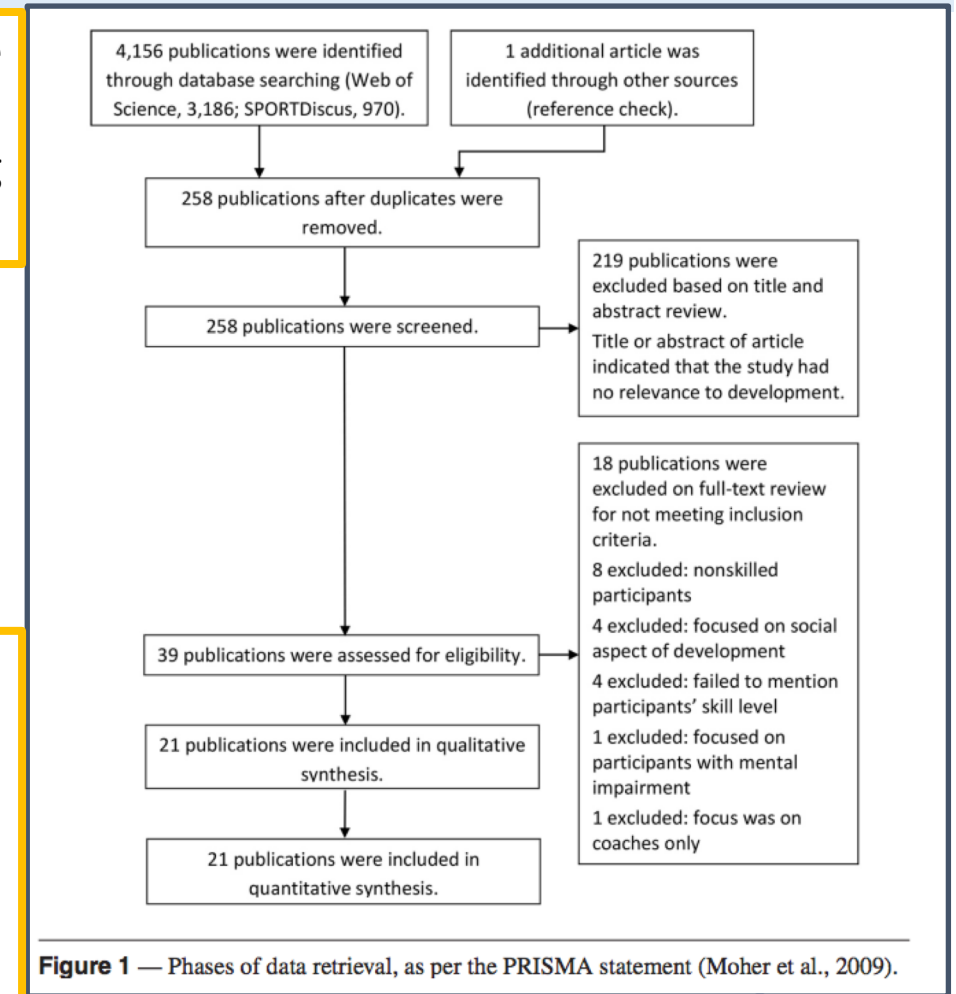

Purpose of this study was to synthesize the available studies that have explored aspects of development of athletes with a disability and examined the key determinants of successful development and sporting performance.

Three conceptual categories:

- ❖ Training and practice (n = 9)
- ❖ Short-term interventions (n = 8)
- ❖ Long-term changes due to training (n = 4)

Conclusion:

- ❖ Studies **focused on short-term interventions** and training programs to enhance performance in practice and competition
- ❖ Due to limited literature available, none of the current studies provided information regarding how to maintain **long-term training or the most effective ways to train.**

Sport science related research topics in para sport articles

Patatas et al, 2018; athletic development in parasports; Storli et al., 2022

Aim: analyze how para athletes **progress through developmental phases** of an athletic career pathway by comparing differences.

The purpose of this study was to investigate the **developmental pathways** of para-athletes toward elite performance.

Results of online survey (n=345, from 15 sports):

- ❖ **Developmental phases** for athletes with acquired impairment takes 4.5 years to reach the elite phase, while athletes with congenital impairment take 6 years.
- ❖ Athletes with **congenital impairment** start in parasport 8 years younger and win medals in international competitions 7 years.

Results of retrospective interviews (n=8, world class para athletes):

- ❖ **Early childhood** sport-related encounters in a family environment followed by sampling of various organized and coach-led sports
- ❖ **Youth sport period:** heterogenous, transitions towards elite-level practice competition, coaching. **Significant contributions** are parents, friends, coaches, motivational climate.

References: Patatas, J. M., De Rycke, J., De Bosscher, V., & Kons, R. L. (2021). It's a Long Way to the Top: Determinants of Developmental Pathways in Paralympic Sport. Adapted physical activity quarterly : APAQ, 38(4), 605–625.

Storli, L.; Aune, M.A.; Lorås, H. Aspects of Developmental Pathways toward World-Class Parasport. Sports 2022, 10, 123.

Health and medicine in para sport articles I.

Aitchison et al, 2022; health benefits of individuals with a disability participating in sport

Aim: To investigate the experiences and perceived **health benefits of sport participation across four disability populations**: children and adolescents, adults, elite athletes and veterans with a disability.

Results, conclusion of this review (children and adolescents, adults, elite athletes and veterans with a disability):

- ❖ Overall sport is a beneficial experience for individuals with a disability
- ❖ Several **positive aspects of sport participation**: socialization opportunities, pure enjoyment, a sense of freedom.

References: Aitchison, B., Rushton, A. B., Martin, P., Barr, M., Soundy, A., & Heneghan, N. R. (2022). The experiences and perceived health benefits of individuals with a disability participating in sport: A systematic review and narrative synthesis. *Disability and health journal*, 15(1), 101164. <https://doi.org/10.1016/j.dhjo.2021.101164>

Health and medicine in para sport articles II.

Sakai et al, 2022; upper extremity health of para athletes

Aim: This study aimed to investigate the characteristics of joint disorders in **elite wheelchair basketball players** using magnetic resonance imaging (MRI).

Results of MRI (n=10, elite para athletes):

- ❖ more right-sided, left-sided and bilateral latero-posterior **lesions**
- ❖ **cysts** found on the lateral-posterior corner of the capitulum of the humerus
- ❖ Severe damage to the **right triangular fibrocartilage complex** was also observed

Fig. 2 Illustration of a wheelchair basketball player falling forward while playing. During the game, players tend to fall on to the hands bilaterally. In this position, the load is applied to the wrist joint by the forearm axis with the elbow at the lateral side. This illustration is an original drawing by MS, the coach of the wheelchair basketball game

References: Sakai, M., Mutsuzaki, H., Shimizu, Y., Okamoto, Y., & Nakajima, T. (2022). Characteristic MRI findings of the shoulder, elbow, and wrist joints in elite wheelchair basketball players. *BMC sports science, medicine & rehabilitation*, 14(1), 141. <https://doi.org/10.1186/s13102-022-00528-9>

Psychological aspect in para sport articles

❖ Bentzen et al, 2022: described elite Para athletes' **mental distress**, before, during and after the Beijing Paralympic Games. They reported a **high proportion of mental distress** during the Winter Paralympic Games among elite para athletes. The results also show that it is important and feasible to monitor and detect Para athletes' mental distress.

References: Bentzen, M., Kenttä, G., Karls, T., & Fagher, K. (2022). Monitoring mental distress in Para athletes in preparation, during and after the Beijing Paralympic Games 2022: A 22 week prospective mixed-method study. *Frontiers in sports and active living*, 4, 945073.

Important research questions in para sports

- ❖ **What is the ideal training program for the different type of elite and amateur para athletes? (to maximize the physical performance, meanwhile prevent chronic diseases)**
- ❖ **How can improve knowledge and education of the sport professionals in para sports?**

Best moments of Paralympics
Never forget, who are the subjects of these researches.
